

The TimeIPS IPSABO Automatic Backup Options Module™

- Allows the creation of automatic backups without a TimeIPS offsite backup account.
- Supports multiple backups per day, up to once an hour
- Multiple backup methods supported, including FTP, SFTP and E-mail
- Configurable options including media and alerts per backup method

TimeIPS IPSABO Automatic Backup Options Module™

Upgrade Your TimeIPS Backup Options

Upgrade the TimeIPS system with Automatic Backup Options including more options for when, where and how backups are made.

Product Description

The TimeIPS **IPSABO – Automatic Backup Options Module™** - upgrades the backup system with numerous additional options. Automatic backups can be performed by FTP and/or SFTP without having a TimeIPS backup account. Multiple backups can be scheduled per day, up to once per hour. Multiple destinations and methods can be used, including E-mail, FTP and SFTP. Options are provided for each backup method to include user media, provide status alerts, success notifications and/or failure notifications. Ideal for installations with access to designated backup servers, strict privacy restrictions and/or limited Internet access.

Key Benefits of IPSABO™

- Allows automated backups without a TimeIPS off-site backup account.
- Allows backups to be scheduled multiple times per day, up to once an hour.
- Supports multiple delivery options including FTP, SFTP and E-mail.
- Many options per backup delivery type including notifications.
- Ideal when dedicated backup servers are available, when strict privacy policies do not allow offsite data storage and/or when Internet access is slow or limited.

TimeIPS IPSABO Automatic Backup Options Module™

Key Features of IPSABO™

Allows the creation of Automated Offsite Backups

- Backups can be automatically created and sent to your server without an active TimeIPS offsite backup account
- Create automatic backups at a selected time of day, or multiple times per day, up to once an hour
- Supports E-mail, FTP and SFTP delivery methods

Backup Administration

Backup Configuration

TimeIPS off-site backup service provides secure automatic off-site backups at an affordable price. In the unlikely event that your TimeIPS system were to have a problem, off-site backups allow you to restore from the last backup in a few minutes. This means you'll be running again as quickly as possible without the worry of local data backup management issues.

TimeIPS Off-site Backup Account:
The TimeIPS off-site backup service requires an Internet connection (with port 443 open on your firewall, if present) and an active backup account. Click the TimeIPS Off-site Backup Account Management link to check your backup account status.

Expiration Date: 01/01/2030 12:00 AM
Size Limit: 256 MB
Last Checked: 02/03/2014 01:14 PM
