**TimeIPS IPSREM  
PC (Web) based Clocking for Mobile Devices™**

**Ideal For Remote Work Sites and Mobile Employees**

Securely clock in/out via desktop, mobile laptop, web-enabled cell phones and PDA's.

**Product Description**

The TimeIPS **IPSREM – PC and Web-Based Clocking for Mobile Devices™** is an expansion module for the TimeIPS system that provides the flexibility for employees to securely clock from a remote location via a web browser. Employees can clock in/out, check their status, leave notes, hear messages and changes jobs without access to a TimeIPS station. This module assures that you can still have full accounting of all time worked for all employees in real-time, even when those employees are remote. Employees clock securely with a user name and password that is set in the Administration section and remote clocking access is easily granted with a check box in the Clocking section of the TimeIPS system. Managers can also remotely check the status of employees and leave messages for all or individual employees using IPSREM™. The remote clocking screen can even be customized with your company's logo and the "Job Code" field can be renamed to whatever best suits your organization. For added flexibility, IPSJOB gives enables you to create custom fields for the remote clocking screen.

Additional security can be provided by adding the TimeIPS IPSSEC – Enterprise Enhanced Security Module™ for SSL encryption of clocking.

**Key Benefits of IPSREM™**

- Allows up to 10 employees per module (add as many modules as needed) to securely clock, change jobs and/or check their status using a PC, laptop, web-enabled cell phone or PDA.
- Employees can leave job/clock notes with each clock event for improved communication.
- Managers can remotely check the status of their employees and/or record messages for any or all employees ensuring more effective employee tracking by management.
- Customize the remote clocking screen with your company's logo, rename the "Job Code" field and create custom clocking fields ensuring your remote clocking screen accurately reflects the needs of your organization.
- Validation of clocking IP addresses can be done by running an audit report for all or specific employees.
- Additional security with SSL encryption is available with the addition of our TimeIPS IPSSEC – Enterprise Enhanced Security Module™

Requires the prior installation of IPSIPS – Intelligent Personnel System Upgrade Module™.

**Web-based Employees Selected: 3 / 1000**

If you need to grant web-based remote access to more employees, purchase the [Remote Employee Access module](#).

**PC Desktop Employees Selected: 0 / 10**

If you need to grant PC-based desktop access to more employees, purchase the [Desktop Time Clock Employee module](#).

# TimeIPS IPSREM PC (Web) based Clocking for Mobile Devices™

## Key Features of IPSREM™ (cont.)

### Customizable Remote Clocking Page

- Insert your company's logo
- Set "Job Code" field to what best suits your organization's needs
- Insert custom fields into the remote clocking page for even more customized tracking of employees

**Remote Clock Setup**

Logo graphic:

Upload new logo:  No file selected.

Rename "Job Code" field:

Status Display Time:  seconds  
When "Remain logged in after clocking" below is disabled, the Remote Clocking interface will return to the login screen after displaying the employee's status for the specified time. Leave blank to disable this behavior.

**Remain logged in after clocking**  
When checked, after clocking in, clocking out, changing jobs, or checking status, the Remote Clocking interface will allow the employee to clock again without requiring a username and password.

**Use One-Button interface**  
The One-Button interface uses a single button for clocking in and out and for changing jobs. The default interface offers separate Clock In, Clock Out, and Change Job buttons to specify which action to take.

**Use badge numbers**  
When checked, the Remote Clocking interface will request the employee's badge number instead of the employee's username and password.

**Log in again from status page**  
When checked, instead of returning to the login screen after displaying the employee's status, the Remote Clocking interface will accept another login on the same page.

**Enable Work Order selector**  
Enables the selection of Work Orders from the Remote Clocking interface, separate from the job list. Enabling this option will add Javascript to the Remote Clocking interface. This is not recommended if you use older devices, browsers, or custom software to access this interface. This option is not necessary to choose a job associated with a work-order: the default job list already provides this.

**Enable Prompt for Work Order Completion**  
Enables the prompt for the percentage completion on Work Orders from the Remote Clocking interface. Use with "Enable Work Order selector" option above.

Rename "Work Order" field:

Tracking Fields			
Name	Format	Required	Optional
Supplies Consumed	Select From List	Out, Change Job Out	
Transportation Method	Select From List	Change Job In	In
Field Settings   Tracking Against   Field Options			
Track Work Time: Require On In			Optional
Track Work Time: Require On Out			Hidden
Track Work Time: Job Change - Old Job Out			Hidden
Track Work Time: Job Change - New Job In			Required
Track Against Benefits			<input type="checkbox"/> Track Benefits
Track Against Holidays			<input type="checkbox"/> Track Holidays
Track Against Piecework			<input type="checkbox"/> Track Piecework
